Serial No. 10/659,805 Docket ITW 0006 IA/41038.9/14350

REMARKS

Claims 1-46 were pending in the present application. Claim 9 has been amended, and new claims 47-54 have been added. As a result of this amendment, claims 1-54 are pending. Reexamination and reconsideration are requested in light of the accompanying amendments and remarks.

Claim 9 has been amended to correct a typographical error. This amendment has been made for purposes of clarity and for no other reason. This amendment does not narrow the claim.

Paragraph [0024] has been amended to identify that the internally flexibilized epoxy resin Araldite PY 322 is a butylated Bisphenol A epoxy resin, as shown in the attached Material Safety Data Sheets (MSDS). Araldite PY 322, Araldite XB 4122 and Araldite PY 4122 are the same compound. It was developed by Ciba Geigy Corp., and originally had the designation XB 4122 in the MSDS in 1986 and 1988 (X stands for experimental). The name appears as Araldite PY 322 in the MSDS issued in 1994. It appears again as XB 4122 in 1997. After Vantico took over Ciba Geigy's epoxy business in 2000, the name appears as PY 4122. Vantico is now part of Huntsman, and the product is listed by Huntsman as PY 4122. No new matter has been added.

The rejection of claims 1, 2, 9, 20, 22, 24-26, and 34 under 35 U.S.C. § 102(b) as being anticipated by, or in the alternative, under 35 U.S.C. § 103(a) as obvious over Logan (U.S. Patent No. 3,892,684) is respectfully traversed. Logan discloses a composition for producing clear, cured epoxy resins. The clear resin is produced by forming a precondensate between a 1,500 to 2,500 molecular weight triepoxide flexibilizer and a curing agent capable of curing an epoxy resin at room temperature, mixing the precondensate at room temperature with a base resin, and curing the mixture at room temperature.

The examiner stated that Logan shows "a resin component comprising a mixture of epoxy resin and an internally flexibilized epoxy resin (col. 3, lines 16-29; col. 5, lines 18-23)." However, contrary to the examiner's position, Logan does not disclose the use of a resin component comprising a mixture of epoxy resin and an internally flexibilized epoxy resin. Logan merely shows the use of a base resin; there is no internally flexibilized epoxy resin in the

-14-

Serial No. 10/659,805 Docket ITW 0006 IA/41038.9/14350

resin component. Col. 3, lines 16-29 shows various epoxy resins that can be used as the base resin, none of which is an internally flexibilized epoxy resin. Col. 5, lines 18-23 states:

Other flexibilizers and plasticizers including flexible epoxy resins, epoxy resins derived from aliphatic acids, hydroxyl-terminated flexibilizers, natural and synthetic rubbers, and resinous modifiers such as vinyl resins, polyester resins, etc. may also be incorporated into the compositions. Such additives, if used, are normally incorporated into the composition at the time the precondensate is mixed with the epoxy resin base, although they can, if desired, be incorporated into the precondensate.

These additives are not mixed with the base resin; they are either mixed with the precondensate or else mixed in when the base resin and precondensate are mixed together. Therefore, Logan does not teach or suggest a resin component comprising a mixture of epoxy resin and an internally flexibilized epoxy resin.

Furthermore, Logan does not teach or suggest a two-part epoxy adhesive in which the cured adhesive has a tensile elongation at room temperature of greater than 30%, as claimed. The examiner stated that "the property limitations of claims 1, 20, and 24 would appear to be inherent of the composition of Logan because he satisfies all of the material limitations of the claimed composition, and it has been found that a chemical composition and its properties are inseparable." However, as demonstrated above, Logan does not teach the same composition. Moreover, the % elongation of the compositions of Logan ranges from 2.6 % to 9.5%. See Tables at cols. 7-8.

As to claim 2, Logan does not teach or suggest a two-part epoxy adhesive having an initial cure time of less than 3 hours as claimed. Logan teaches that "[r]oom temperature curing normally takes from about 3 hours to about 7 days." Col. 4, lines 23-24.

As to claim 9, Logan does not teach or suggest a resin component free of nonylphenol and a hardener component free of nonylphenol. The examiner cited col. 2, line 10 through col. 3, line 63 for support. However, Logan makes no mention of the components being free of nonylphenol there or anywhere else.

As to claims 20 and 22, Logan does not teach or suggest a two-part epoxy in which the reactive mixture of the resin component and the hardener component has an initial cure time of -15-

Serial No. 10/659,805

Docket ITW 0006 IA/41038.9/14350

about 1.5 to 2 hours and a tensile elongation after curing of greater than 120%, or a tensile elongation after curing of greater than 80%. As discussed above, the resin component in Logan is not the same as the claimed resin component. Moreover, the curing time in Logan is from about 3 hours to about 7 days, and the elongation is less than 10%.

Therefore, claims 1, 2, 9, 20, 22, 24-26, and 34 are not anticipated by, and they would not have been obvious to one of ordinary skill in the art at the time the invention was made over Logan.

The rejection of claims 3-5, 7, 10, 12, 14, 17, 27-29, 31, 35, 37, 44, and 45 under 35 U.S.C. § 103(a) as being unpatentable over Logan in view of Marten (U.S. Patent No. 5,459,208) is respectfully traversed. Marten is cited as teaching that "accelerators, thixotropic agents, and coupling agents, along with plasticizers and fillers are recognized in the art as customary additives for flexible epoxy resin compositions." However, Marten does not remedy the deficiencies of Logan.

Therefore, claims 3-5, 7, 10, 12, 14, 17, 27-29, 31, 35, 37, 44, and 45 would not have been obvious to one of ordinary skill in the art at the time the invention was made over Logan in view of Marten.

New claims 47-54 have been added. Support for the new claims is found in paragraphs [0024] and [0031]. As discussed above, Logan does not disclose the use of an internally flexibilized epoxy resin in a mixture with an epoxy resin. As Logan does not teach or suggest the use of any internally flexibilized epoxy resin, it does not teach or suggest the use of internally flexibilized bisphenol A type epoxy resins or internally flexibilized bisphenol F type epoxy resins, nor does it teach or suggest the use of butylated bisphenol A epoxy resins. In addition, Logan does not teach or suggest the use of butadiene acrylonitrile flexibilizers, or amine terminated butadiene acrylonitrile flexibilizers in the hardener component.

Applicant gratefully acknowledges the examiner's statement that claims 6, 8, 11, 13, 15, 16, 18, 19, 21, 23, 30, 32, 33, 36, 38-43, and 46 would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. However, this was not necessary in light of the arguments presented.

Serial No. 10/659,805 Docket ITW 0006 IA/41038.9/14350

CONCLUSION

Applicant respectfully submits that, in view of the above amendment and remarks, the application is now in condition for allowance. Applicant respectfully requests that claims 1-54 be passed to allowance.

If the Examiner has any questions or comments regarding the present application, he is invited to contact the undersigned attorney at the telephone number indicated below.

Respectfully submitted, DINSMORE & SHOHL LLP

Accidental Release Measures: Avoid all personal contact. Take up with absorbent material. Shovel into closable containers. Flush contaminated area with water.

7. HANDLING AND STORAGE

Precautions: Avoid contact with eyes, skin and clothing. Avoid breathing vapor, mist or spray. Use only with good ventilation. Individuals should wash thoroughly after handling. Store in dry area in closed containers. For industrial use only.

8. EXPOSURE CONTROLS / PERSONAL PROTECTION

Personal Protective Equipment: West appropriate equipment to prevent probability of skin or eye contact.

Skin Protection: Wear impervious gloves.

Respiratory Protection: Use NIOSH approved respirator suitable for organic vapors, if required,

Eye Protection: Wear splash-proof chemical goggles.

Engineering Controls: Good general mechanical ventilation and local exhaust

9. PHYSICAL AND CHEMICAL PROPERTIES

Appearance:

Clear

Physical State:

Viscous Liquid

Page 2 of 4

FAMSE: CIRA SPECIALTY CHEM At

15/99 01:23:47 Page 3

Effective Date: 7/31/97

XB 4122

Solubility in Water: Vapor Pressure: Specific Gravity: -3 x 10(-5) g/1 at 20°C 4.5 x 10(-5) mm Hg at 20°C 1.084 at 20°C (68°F) (H2Ö = 1)

10. STABILITY AND REACTIVITY

Conditions to Avoid: Elevated temperatures.

Stability: Stable.

Incompatibility: Strong oxidizing agents.

Hazardous Decomposition Products: Carbon monoxide, carbon dioxide, eldehydes.

Hazardous Polymerization: Will not occur.

11. TOXICOLOGICAL INFORMATION

Acute Oral Effects (LD50): (Rat) Greater than 2000 mg/kg.

Acute Dermal Toxicity (LD50): (Rat) Greater than 2000 mg/kg.

Sensitization: (Guinea Pig) Extreme skin sensitization.

Skin Irritation: (Rabbit) Not an irritant.

Eye Irritation: (Rabbit) Not an irritant.

Mutagenicity:
Ames Test: positive

Micronucleus Test (Chinese Hamster): negative

12. ECOLOGICAL INFORMATION

Additional Information: No ecological information available.

13. DISPOSAL CONSIDERATIONS

Waste Disposal Mathod: Dispose in accordance with federal, state and local regulations.

14. TRANSPORT INFORMATION

Department of Transportation: Not regulated,

15. REGULATORY INFORMATION

OSHA Status: This Material Safety Data Sheet (MSDS) has been prepared in compliance with the federal OSHA Hazard Communication Standard 29 CFR 1910.1200. This product is considered to be a hazardous chemical under that standard.

TSCA Inventory Status: Chemical components listed on TSCA Inventory.

Page 3 of 4

FAMSR: CIEA SPECIALTY CHEM At

05/99 01:23:47 Page 4

Effective Date: 7/31/97

XB 4122

SARA Title III: Section 313 - Toxic Chemical(s): This product does not contain a toxic chemical for routine annual Toxic Chemical Release Reporting under Sec 313 (40 CFR 372)

RCRA: Not a hazardous waste under RCRA (40 CFR 261).

CERCLA: Not listed

Canadian Inventory Status (CEPA): Included on Non-Domestic Substances List (NDSL).

New Jersey Right-to-Know: The following is required composition information:

CAS Number: 71033-08-4

Chemical Name: Oxirane, 2,2'-[(1-methylethylidene)bis[4, 1-phenyleneoxy[1-(butoxymethyl)-2, 1-ethanediyl]oxymethylene]]bis-

Pennsylvania Right-to-Know: The following is required composition information:

CAS Number: 71033-08-4

Chemical Name: Oxirane, 2.2'-[(1-methylethylidene)his[4, 1-phenyleneoxy[1-(butoxymethyl)-2, 1-ethanediyl]oxymethylene]]bis-

Comment: Not on Pennsylvania Hazardous Substance List.

16. OTHER INFORMATION

SECTION IV-FIRE AND EXPLOSION HAZARD DATA

FLASH POINT

351F

EXTINGUISHING MEDIA:

CARBON DIOXIDE, FOAM, DRY CHEMICAL, MATER SPRAY.

FIRE FIGHTING PROCEDURES-SPECIAL:

USE SELF-CONTAINED BREATHING APPARATUS.

UNUSUAL FIRE AND EXPLOSION HAZARDS:

DECOMPOSITION AND COMBUSTION PRODUCTS MAY BE TOXIC.

____ SECTION V-REACTIVITY DATA _

STABILITY:

STABLE.

CONDITIONS TO AVOID:

ELEVATED TEMPERATURES.

INCOMPATIBILITY:

STRONG OXIDIZING AGENTS.

HAZARDOUS DECOMPOSITION PRODUCTS:

CARBON MONOXIDE, CARBON DIOXIDE, ALDEHYDES.

HAZARDOUS POLYMERIZATION.

HILL NOT OCCUR.

SECTION VI-HEALTH HAZARD BATA ____

PRIMARY ROUTES OF EXPOSURE:

DERMAL.

ORAL LDSD:

(RAT) GREATER THAN 2000 MG/KG.

DERMAL LD50:

(RAT) GREATER THAN 2000 MG/KG.

SKIN IRRITATION:

(RABBIT) NOT AN IRRITANT.

EYE IRRITATION:

(RABBIT) HOT AN IRRITANT.

SENSITIZATION,

(GUINEA PIG) EXTREME SKIH SENSITIZATION.

MUTAGENICITY

AMES TEST: POSITIVE

MICRONUCLEUS TEST (CHINESE HAMSTER). HEGATIVE

OVEREXPOSURE EFFECTS:

OVEREXPOSURE TO THIS MATERIAL CAN CAUSE SEVERE ALLERGIC SKIN

REACTIONS AND MAY CAUSE SLIGHT 5KIN AND EYE IRRITATION.

MEDICAL CONDITIONS AGGRAVATED BY EXPOSURE:

ALLERGY, ECZEMA OR SKIN CONDITIONS.

EMERGENCY AND FIRST AID PROCEDURES-EYES.

- -- - - - -

FOR EYE CONTACT, FLUSH EYES WITH PLENTY OF MATER FOR SEVERAL MINUTES. GET MEDICAL ATTENTION IF IRRITATION OCCURS.

ARALDITE PY 322

9 /6 #:9190 \$44 809

FOOM 247→

SEAT BY:CIBA, POLYMERS : 6- 7-96 ;11:48AM ;

EMERGENCY AND FIRST AID PROCEDURES-SKIN:
FOR SKIN CONTACT, WASH WITH LARGE AMOUNTS OF RUNNING WATER,
AND SOAP, IF AVAILABLE, FOR 15 MINUTES. REMOVE CONTAMINATED
CLOTHING AND SHOES. GET IMMEDIATE MEDICAL ATTENTION. DISCARD OR DECONTAMINATE CLOTHING BEFORE RE-USE AND DESTROY
CONTAMINATED SHOES.

EMERGENCY AND FIRST AID PROCEDURES-INGESTION:

IF SMALLOHED, GIVE AT LEAST 3-4 GLASSES OF MATER BUT DO NOT INDUCE VOMITING. IF VOMITING OCCURS, GIVE MATER AGAIN. DO NOT GIVE ANYTHING BY MOUTH TO AN UNCONSCIOUS OR CONVULSING PERSON. GET MEDICAL ATTENTION. HAVE PHYSICIAN DETERMINE WHETHER VOMITING OR STOMACH EVACUATION IS NECESSARY.

EMERGENCY AND FIRST AID PROCEDURES-INHALATION:

IF INHALED, REMOVE FROM AREA TO FRESH AIR. GET MEDICAL

ATTENTION IF RESPIRATORY IRRITATION DEVELOPS OR IF BREATHING

BECOMES DIFFICULT.

EMERGENCY AND FIRST AID PROCEDURES-OTHER:
PROMPTLY REMOVE WET CONTAMINATED NON-IMPERVIOUS CLOTHING.
WASH BEFORE REUSE.

SECTION VII-SPILL OR LEAK PROCEDURES _____

SPILL PROCEDURES:

AVOID ALL PERSONAL CONTACT. TAKE UP HITH ABSORBENT MATERIAL. SHOVEL INTO CLOSABLE CONTAINERS. FLUSH CONTAMINATED AREA MITH MATER.

WASTE DISPOSAL METHODS:
DISPOSE IN ACCORDANCE MITH FEDERAL, STATE AND LOCAL
REGULATIONS.

SECTION VIII-SPECIAL PROTECTION INFORMATION

VENTILATION.

GOOD GENERAL MECHANICAL VENTILATION AND LOCAL EXHAUST.

PROTECTIVE GLOVES:

HEAR IMPERVIOUS GLOVES.

EYE PROTECTION:

HEAR SPLASH-PROOF CHEMICAL GOGGLES.

RESPIRATORY PROTECTION:

USE NIOSH APPROVED RESPIRATOR SUITABLE FOR ORGANIC VAPORS, IF REQUIRED.

OTHER PROTECTIVE EQUIPMENT.

MEAR APPROPRIATE EQUIPMENT TO PRÉVENT PROBABILITY OF SKIN OR EYE CONTACT.

SECTION IX-SPECIAL PRECAUTIONS _____

HMIS CODE:

HEALTH: 1 FIRE: 1

REACTIVITY : 0

HANDLING, SHIPPING AND STORING PRECAUTIONS:

WARNING! CAN CAUSE SEVERE SKIN SENSITIZATION AND MAY CAUSE IRRITATION EFFECTS.

ARALDITE PY 322
